## ABOUT US

### Team Member Snapshot: Erik Vazquez

Erik Vazquez is a Change-Out Technician at Climate Control Services, and among the freshest new surge of enthusiastic team members at the company with a year under his belt. Change-out Techs are part of the team of pros in charge of replacing your old system with a new one. This position requires lots of skill, expertise and sometimes some creative handiwork to retrofit modern technology into not-so-modern homes and businesses.

The best part of his workday, says Erik, is the pride he feels surveying his just completed install. Knowing that the client is about to experience the slew of benefits of a new system---from reduced power bills to feeling a whole heck of a lot more comfortable---gives Erik a

tremendous sense of satisfaction.

During his time away from Climate Control Services, Erik plays as hard as he works. He says he loves to sing karaoke, plays racquetball regularly, and camps and canoes at Jonathan Dickinson State Park and along the Peace River. He enjoys cooking and spending time with his wife.

## Spring Into Action and Clear Those Leaves

Spring is a great time of year here in South Florida. It's also when deciduous trees and shrubs tend to drop their leaves and the new growth really comes on. Don't forget to keep your outside AC unit clear of the debris and encroaching new green that's more likely to impede airflow during the months leading up to summer than at any other time. You'll save dollars on your power bill and stay cool as the South Florida temps climb hotter and hotter.

# SERVICE TIP

## Help Ensure Your AC Stays On During Off-Season

If you're a seasonal resident, you may be preparing to leave South Florida for summer. To help ensure that your system continues to run strong while you're away, schedule with Climate Control Services now for system maintenance. We'll inspect the 21 top mechanisms that typically can break down on modern ACs, and adjust or replace them if necessary, to help you avoid returning to rampant mold growth or water damage.

While we're on the subject of preventive maintenance, now is also the time of year that we like to remind folks about our Appliance Service Contracts. Summer is particularly tough on all your major appliances, not just your AC. Your refrigerator works harder as it's opened more often by thirsty family members. Have a freezer in your garage? You know how hot it can get out there. Typically, your clothes washer and dryer are doing increased loads of laundry with the ramp up of outdoor activities. There are more baths and showers taken, more cars washed, longer watering times for your lawn and garden, all of which puts more stress on your plumbing. The list goes on and on.

With an Appliance Service Contract from Climate Control Services, should a major appliance in

your home or business break down, one call is all it takes and the name you've trusted for more than 40 years is right there to repair or replace it. No Googling "plumbers" or "AC repair." No wondering if the repairman will show. No frustration. No hassle. Just fast and professional service so you and your family can get back to what summers are made for.

Whether you're going away for the season, on a summer vacation or you just appreciate the peace of mind that prompt, experienced service offers, give Climate Control Services a call. We're always low on the pressure and high on satisfaction, with thousands of loyal customers since 1973 to prove it!

## ABOUT US

### A Little Spring Training R&R at Roger Dean Stadium

The guys and gals of Climate Control Services work hard and so the powers that be here like to treat our team members when we get the opportunity. We recently got a box for a Detroit Tigers-Miami Marlins exhibition game at Roger Dean Stadium. While the weather didn't hold for the full nine innings, full use of the temporary digs was made. Go Marlins!

## Why Does My AC Freeze in Hot Weather?

*Dear Dr. Drafty,*

*Last year, when the temperature really climbed, my AC froze up, literally. There was ice inside the outdoor unit and everything. What gives? How does ice form when it's in the 80s and 90s outside?*

**John Roscoe, Wellington, FL**

Dear John,

Central AC freeze up is not unusual, but it certainly is counter-intuitive, isn't it? The reason your system is icing over is likely because of a restriction of airflow through the coil or a lack of refrigerant.

If something is obstructing airflow through the coils, ice will tend to accumulate and in short order you can have a mess on your hands.

Similarly, because refrigerant is the catalyst that helps transport air through the coils, if the unit is low on this key additive, airflow will slow or stop and the same ice buildup results.

Once or twice shouldn't have too much of an adverse effect on system parts. But if your AC ices up just once, there's an issue and it will again, and this repeated malfunction will certainly take its toll. The good news is the fix is generally pretty simple if completed by an experienced AC professional. I recommend you don't wait until the inevitable next time to schedule service. Ice is for your cold drinks, not your AC system.
